ABOUT ME

Experienced Senior Fullstack Software Engineer with 6+ years of expertise in JavaScript, Python, TypeScript, HTML, and CSS, along with modern frameworks such as Node.js, React.js, NestJS, Express.js, FastAPI, and Flask. Proficient in full-stack development, AWS services, and DevOps infrastructure. Known for delivering high-quality solutions under tight deadlines and excelling both independently and in collaborative team environments. Committed to continuous learning and staying current with industry trends.

WORK EXPERIENCE

Senior Fullstack Engineer
BCT Consulting   *April 2024 - Present*

- **Proficient Backend and Data Analysis Engineer** with expertise in integrating and processing medical trial protocol documents from third-party services. Responsible for designing and maintaining data pipelines that extract, transform, and load (ETL) protocol content into a PostgreSQL database. This system supports the Clinical Trials team by delivering structured and actionable data, including schedules of activities, visit timelines, and lab procedure mappings, directly derived from complex protocol documents.
- **Technologies:-** AWS Services, Python, Pandas, Node.js, TypeScript, AWS Cloud Formation, SQL, PostgresSQL, AWS Lambda, AWS API Gateway, graphQL, Appsync, React, IAM, CI/CD, CDK

Senior JavaScript Developer L1
Srijan A Material Plus Company   *June 2022 - April 2024*

- Spearheaded Backend Development initiatives at McKinsey & Company, enhancing product pricing strategies through the Common Periscope Module. Worked on one of launchpad dashboard PCM modules, helped sales and marketing people to get all filtered tasks on dashboard and improved productivity.
- **Technologies:-** Nest.js, TypeScript, graphql, React.js, Postgresql, Docker, Kafka, Nats, Splunk, AWS(EC2, S3, Lambda functions), Jest.js, sonarqube report, Gitlab CI pipeline, Dynatrace

Software Engineer
Mantra Labs Pvt Ltd   *May 2021 - June 2022*

- Proficient in Full Stack Development, enhancing user experiences aligned with client specifications.Worked on multiple projects like Analytic tool, Web banner, WIFY, TATA AIA (Urja App) and Globalise: US Stocks & ETFs application
- **Technologies:-** express.js, react.js, redux.js, elasticsearch, kibana, redis, postgres, Azure blob, hitmap.js, vanilla JavaScript, HTML, CSS, Jquery.

Tech Lead
Pixelbug Technology Pvt Ltd   *Aug 2020 - April 2021*

- At Pixelbug Technology I worked as Tech Lead, It is our own startup that five friends started. I was leading all tech related functionality and development. We created one mobile gaming app based on mathematics for grade 1th to 10th Students
- **Technologies:-** hapi.js, postgreSql, Knex.js, razorpay-sdk, firebase, google cloud functions, react.js, Redux.js, HTML, CSS, material UI, react-native, EC2, S3, Flask, jquery, python, google analytics.

Software Developer
Navgurukul Social Welfare   *April 2019 - Aug 2020*

- Navgurukul Social Welfare is an NGO, from this I started my code journey it is one year residential software development course to provide underprivileged students, after completing course I join with them as Software Engineer and contributed in there various project and worked on Admission Dashboard for the recruitment team from scratch using react.js and for backend hapi.js.
- **Technologies:-** hapi.js, MySql, knex.js, S3, react.js, redux.js, jquery, HTML, CSS, webpack, python programming, Django, Google Map API's

---

MAJOR PROJECTS

Launchpad (Dashboard)

Launchpad is a Mackinsey & Companies Common Periscope Module It helps sales and marketing people to get all filtered pricing tasks on the dashboard to updated prices on a daily basis. Using this dashboard we improved pricing tools productivity.

Globalise: US Stocks & ETFs

Globalise is an investment web and mobile app to provide investors a guided investment journey in global stock markets. Through Globalise you can invest in more than 5,500+ U.S. stocks and NYSE listed companies and ETFs. I worked here as a frontend developer

TATA AIA (Urja App)

It is used for SME business owners, this app offers working capital solutions URJA is a revolutionary app, launched for Tata AIA's SME business customers to help them get working capital solutions digitally in 24 hours, with no paperwork on their existing policy. I worked on this as a backend developer to use their wrapper API to calculate the policy premium and available offers or whether the user is applicable for policy or not

PixelMath Website

Pixelmath website is an official website that I built from scratch for pixelmath's advertisement and about Pixelbug technology.

Kalam

Kalam I built from scratch for the NavGurukul admission recruitment team to help them to track the student admission process and status. Also it helps them to send notifications and offer letters once some students get selected for a course.

NG Exception

Ng exception is python interpreter in that I contributed to print python errors in Hindi language it helps to non English medium students to understand the exact python error
